You are free to:

- **Share** — copy and redistribute the material in any medium or format
- **Adapt** — remix, transform, and build upon the material for any purpose, even commercially.

The licensor cannot revoke these freedoms as long as you follow the license terms.

Under the following terms:

- **Attribution** — You must give appropriate credit, provide a link to the license, and indicate if changes were made. You may do so in any reasonable manner, but not in any way that suggests the licensor endorses you or your use.
- **ShareAlike** — If you remix, transform, or build upon the material, you must distribute your contributions under the same license as the original.
- **No additional restrictions** — You may not apply legal terms or technological measures that legally restrict others from doing anything the license permits.

The origin of time

```
$ man 7 time
```

The Epoch

UNIX systems represent time in seconds since the Epoch, 1970-01-01 00:00:00 +0000 (UTC).

Counting time

UNIX time is stored in a signed 32-bit integer, with values ranging from 0 to 2,147,483,647.

- 0 is used for January 1, 1970, 00:00:00.
- 2,147,483,647 will be used for January 19, 2038 03:14:07.

2038 bug

- Systems still relying on a signed 32-bit integer after January 19, 2038 will not be able to process time properly, and will likely experience various type of issues.
- Systems should be tested, updated or migrated before that date.
- Various languages, applications and operating systems have already implemented a solution. Linux is now using a 64-bit counter for this.
